Recycling City – where large scale Recycling happens

Denmark is an international pioneer in renewable energy and climate protection

In northern Denmark, the town of Frederikshavn is the center of Recycling City. We are determined to develop opportunities based on a circular economic approach by strategically identifying businesses within recycling.

How we work in Recycling City

- We attract businesses and use the Recycling City umbrella to create strong industrial synergies.
- We are committed to seize today's opportunities and generate a strong and thriving business community.
- We are working strategically with global value streams in waste, and transforming them into new high-value raw materials.

Benefits of being part of Recycling City

- At Recycling City you become part of a business cluster that works with top-level entrepreneurs and large-scale recycling.
- Potential co-financing from the EU Regional Development Fund.
- Access to knowledge and skills.
- Optimum infrastructure on land, at sea and in the air.
- Global focus on value streams in waste/supply chain security.
- Obtaining branding value in a pioneer area with a strong recycling image.
- Support for upscaling and development.

Frederikshavn Municipality became Denmark's first Climate Municipality in 2007. The municipality's focus on energy optimizations attracts visitors from all over the world. Furthermore, the Municipality of Frederikshavn actively integrates the UN's 17 Sustainable Development Goals. The will power, the partners and the capacity to handle and upgrade large quantities of waste materials are already present. Among others you will find the world's first and Europe's largest custom-built decommissioning site for environmentally friendly scrapping of offshore platforms etc. at the Port of Frederikshavn.

We are committed to do large scale sustainable business. Together we shall locate and deploy future solutions to solve the challenges of today's waste.
